

## Title

Markdown lets you write content as plain text and later convert it into many output formats such as HTML, PDF, and DOCX.

A common tool for performing these conversions is Pandoc.

## Lists

- List item 1
- List item 2
- List item 3

## Mathematics

LaTeX-style mathematics can be embedded directly in Markdown. For example,

$$\int_0^1 dx \sin(\alpha x)$$

## Code

Code blocks can be included with syntax highlighting:

```
import math
```
