

Title

Markdown lets you write content as plain text and later convert it into many output formats such as HTML, PDF, and DOCX.

A common tool for performing these conversions is Pandoc.

Headings

Heading 1

Heading 2

Heading 3

Heading 4

Heading 5 Heading 6

Emphasis

Italic text or *italic text*

Bold text or **bold text**

Bold and italic text

~~Strikethrough text~~

Lists

- List item 1
- List item 2
- List item 3
 - Nested item A
 - Nested item B

Ordered List

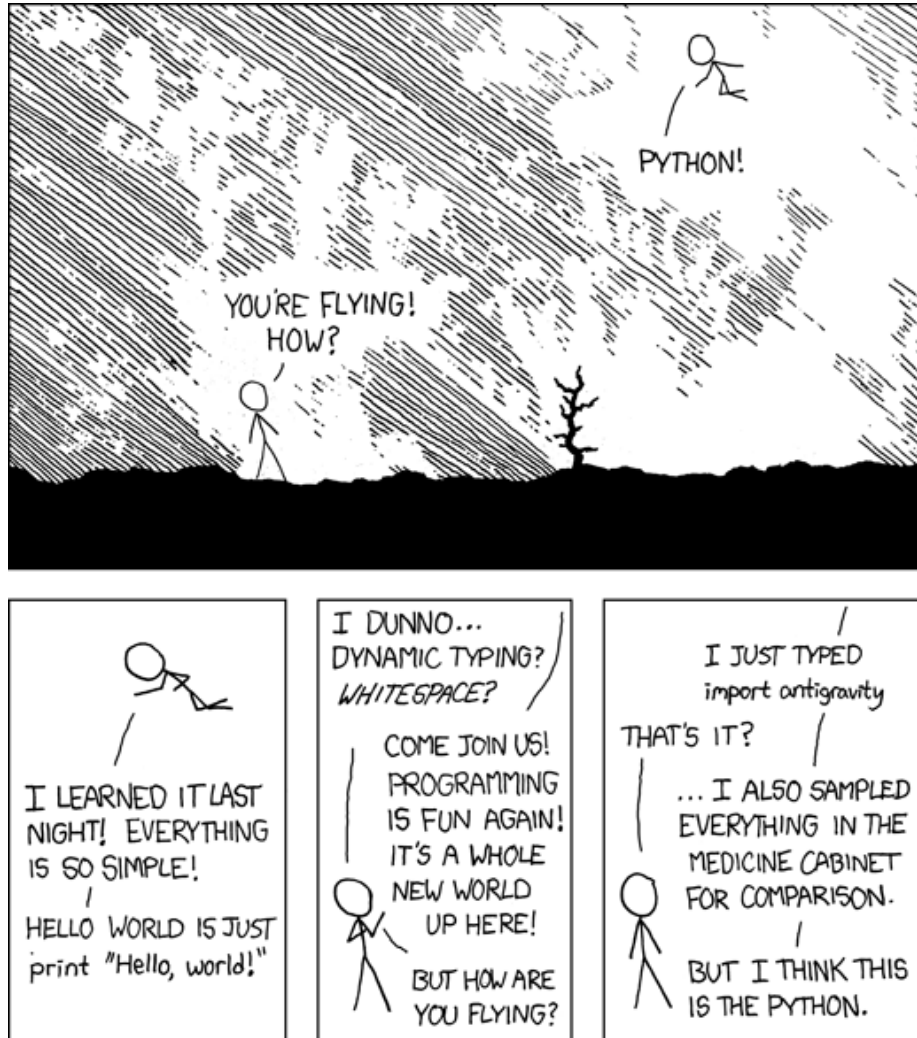

1. First item
2. Second item
3. Third item

Task List

- ☒ Completed task
- ☐ Incomplete task
- ☐ Another incomplete task

Links and Images

Inline link

Blockquotes

This is a blockquote.

It can span multiple paragraphs.

Nested blockquotes are also possible.

Horizontal Rule

Mathematics

LaTeX-style mathematics can be embedded directly in Markdown:

$$\int_0^1 dx \sin(\alpha x)$$

Display-style equations can also be written on their own line:

$$E = mc^2$$

Code

Inline code can be written like `this`.

Code blocks can be included with syntax highlighting:

```
import math
console.log("Hello, world!");
```

Tables

Name	Language
Pandoc	Haskell
Jekyll	Ruby

Escaping Characters

Use a backslash to escape special characters, e.g. `*not italic*`.
